

Lumina Daily — Product Specification

Version 1.0 — MVP Status: In Development

1. Overview

App name: Lumina Daily

Tagline: "Your sky, every morning."

Platforms: iOS (iPhone first)

Languages: English, Russian

Target launch: App Store (worldwide)

Lumina Daily is a personalized astrology companion app. Users create a profile with their birth data once. Every morning, the app delivers fresh AI-generated astrological guidance across 6 life categories, personalized to each user's natal chart and today's planetary transits.

2. Core User Flow

Install → Onboarding → Natal Profile Generated → Daily Advice (every morning)

1. User installs the app
 2. Selects language (English / Russian)
 3. Completes onboarding (name, gender, date/time/place of birth)
 4. App generates their natal chart (server-side, Swiss Ephemeris)
 5. User sees their natal profile summary
 6. User selects their preferred interpretation mode
 7. User enables push notifications
 8. Every morning: server generates advice → push notification sent → user opens app → reads guidance
-

3. Onboarding Screens

Screen 1 — Welcome

- Lumina Daily logo + tagline
- "Get started" button
- Language selector (EN / RU)

Screen 2 — Name

- Input: "What should we call you?" (name or nickname)
- Validation: 1-30 characters

Screen 3 — Gender

- Options: Female / Male / Non-binary / Prefer not to say
- Used for grammatical gender in Russian text generation

Screen 4 — Date of Birth

- iOS native DatePicker (wheel style)
- Range: 1920 - today minus 13 years

Screen 5 — Time of Birth

- iOS native TimePicker
- Toggle: "I don't know my exact birth time"
- If unknown: use 12:00 noon as default, flag in profile, note in advice that Rising sign may be approximate

Screen 6 — Place of Birth

- Search field with autocomplete (Google Places API)
- Shows city + country in results
- On select: stores city name, latitude, longitude
- Resolves historical timezone automatically (TimeZoneDB API)

Screen 7 — Generating Profile

- Animated loading screen ("Reading your stars...")
- Backend call: calculate natal chart
- Duration: 2-4 seconds (or real API time)

Screen 8 — Profile Ready

- Shows: Sun sign, Moon sign, Rising sign
- One-sentence personality summary
- "Continue" button

Screen 9 — Choose Your Mode

- Carousel of interpretation modes (see Section 6)
- Brief description of each
- User selects one (can change later in Settings)

Screen 10 — Notifications

- "Get your daily guidance at the right time"
 - Time picker (default: 8:00 AM)
 - "Enable notifications" button
 - "Maybe later" skip option
-

4. Main Screens

Tab 1 — TODAY

Purpose: Daily guidance hub. The screen users open every morning.

Components:

- Status bar with date + moon phase badge
- Greeting: "Good morning, [Name]"
- Active mode pill (e.g. "♦ Psychological")
- Hero card:
 - Today's key theme (one sentence)
 - Active transit tags (e.g. "Venus trine Moon", "Mercury direct")
- Score strip: Love / Work / Energy / Mood (scores 1-10, mini bar)
- 6 category cards (expandable):
 - Love & Relationships
 - Work & Focus
 - Energy
 - Communication
 - Mood
 - Watch For (risks/tensions)
- Each card: title, score pill, 3-4 sentence advice text

Behavior:

- Content generated once per day per user per mode
 - If mode is changed: regenerates for new mode
 - Pull to refresh: shows last generated time
 - Long press card: save to history (Phase 2)
-

Tab 2 — CHART

Purpose: User's permanent natal profile.

Components:

- Simplified natal wheel (visual, non-interactive MVP)
 - Sun / Moon / Rising cards
 - Dominant element (Fire / Earth / Air / Water)
 - Dominant modality (Cardinal / Fixed / Mutable)
 - Planet placements list (planet, sign, house, retrograde flag)
 - "What this means" — plain language summary per placement
-

Tab 3 — EXPLORE

Purpose: Switch interpretation modes; understand what each means.

Components:

- Mode cards (carousel or list):
 - Western Classical
 - Vedic
 - Psychological
 - Practical Daily
 - Guidance (soft)
 - Predictive (direct)
 - Each mode: name, 2-sentence description, example quote
 - Active mode highlighted
 - Tap to switch → Today screen content regenerates
-

Tab 4 — CALENDAR (*MVP: simple version*)

Purpose: Basic month view of daily energy scores.

Components:

- Month calendar
 - Each day: colored dot indicating overall energy score
 - Tap day: shows cached advice summary for that day (if generated)
 - Future days: "Available on the day"
-

Tab 5 — PROFILE

Purpose: Settings, birth data, preferences, subscription.

Components:

- Name + sign summary
 - Edit birth data
 - Language toggle (EN / RU)
 - Notification time setting
 - Interpretation mode shortcut
 - Subscription status
 - Privacy policy link
 - Delete account option
-

5. Astrology Engine

Birth Data Required

date_of_birth	(YYYY-MM-DD)
time_of_birth	(HH:MM, 24h)
time_known	(boolean)
latitude	(float)
longitude	(float)
timezone_id	(string, e.g. "Europe/Moscow")
utc_offset_at_birth	(integer, seconds)

Timezone Resolution

1. User types city name → Google Places Autocomplete API

2. Returns: place name, lat, lng
3. Backend calls TimeZoneDB API with lat/lng + birth date
4. Returns historical timezone offset (accounts for DST, historical changes)
5. Stores both timezone_id and utc_offset_at_birth

Natal Chart Calculation

- Library: `pyswisseph` (Python wrapper for Swiss Ephemeris)
- Calculates: all 10 planets + ASC/MC in signs and houses
- House system: Placidus (default), with option to switch to Whole Sign for Vedic mode
- Stores result as JSON in user profile (calculated once, never changes)

Daily Transit Calculation

- Run daily at 02:00 UTC for all users
- Calculate today's planetary positions
- For each user: compute aspects between transits and natal planets
- Aspect orbs: conjunction $\pm 8^\circ$, opposition $\pm 8^\circ$, trine $\pm 6^\circ$, square $\pm 6^\circ$, sextile $\pm 4^\circ$
- Generate aspect list with strength score (exact = 10, at orb limit = 1)

Category Scoring (1-10)

Each category scored from transit aspects:

Category	Key planets considered
Love	Venus, Moon, Mars (natal + transit)
Work	Sun, Saturn, Mercury, MC
Energy	Mars, Sun, 1st house ruler
Communication	Mercury, 3rd house ruler
Mood	Moon, ASC ruler
Risk/Watch For	Saturn, Mars squares/oppositions, retrograde planets

Score formula: sum of aspect strengths $\times$ weight per planet $\rightarrow$ normalized to 1-10.

AI Text Generation

Provider: OpenAI GPT-4o or Anthropic Claude API

Trigger: Daily batch job (02:00-04:00 UTC)

Input per user per category:

System prompt:
"You are an astrology advisor for the app Lumina Daily.
Write personalized daily guidance in {language}.
Mode: {mode}. Tone: {tone_description}.
Be warm, specific, and varied. Never repeat phrases used in the last 7 days.
Do not mention specific degree numbers or technical jargon.
Length: 2-4 sentences."

User prompt:
"User: {name}, {gender}, Sun in {sun_sign}, Moon in {moon_sign}, Rising {rising}.
Today's aspects: {aspect_list}.
Category: {category}.
Write today's guidance."

Output: Plain text, 2–4 sentences, stored in database.

Interpretation Mode Prompt Modifiers

Mode	Tone instruction added to prompt
Western Classical	"Use classical astrological symbolism and house meanings."
Vedic	"Use Vedic/Jyotish perspective. Reference dharma, karma, and life purpose."
Psychological	"Frame guidance as inner experience, emotional patterns, and growth edges."
Practical Daily	"Give concrete, actionable behavioral suggestions. Be direct and specific."
Guidance (soft)	"Be encouraging, gentle, and non-predictive. Focus on possibility, not fate."
Predictive	"Be direct about likely outcomes and timing. Use confident, clear language."

6. Backend Architecture

Stack

Language: Python 3.11+
Framework: FastAPI
Database: PostgreSQL (via Supabase – managed, free tier available)
Cache: Redis (via Upstash – managed, free tier available)
Ephemeris: pyswisseph
AI: OpenAI API (GPT-4o) or Anthropic API

Push:	Firebase Cloud Messaging (FCM)
Hosting:	Railway.app
Scheduler:	APScheduler (runs daily batch job)

Key API Endpoints

POST	/api/v1/auth/register	
POST	/api/v1/auth/login	
GET	/api/v1/auth/apple	(Sign in with Apple)
POST	/api/v1/profile/create	
PUT	/api/v1/profile/update	
GET	/api/v1/profile/natal	(returns natal chart JSON)
GET	/api/v1/advice/today	(returns today's advice for user)
GET	/api/v1/advice/date?date=	(returns cached advice for past date)
POST	/api/v1/places/search	(proxies Google Places)
POST	/api/v1/timezone/resolve	(returns historical timezone for lat/lng + date)
PUT	/api/v1/settings/mode	(change interpretation mode)
PUT	/api/v1/settings/notifications	
DELETE	/api/v1/account	(GDPR delete)

Database Tables

sql

users

id, email, apple_id, created_at, language, subscription_status

profiles

id, user_id, name, gender,
date_of_birth, time_of_birth, time_known,
city_name, latitude, longitude, timezone_id, utc_offset_at_birth,
natal_chart_json, interpretation_mode,
notification_time, fcm_token

daily_advice

id, user_id, date, mode, language,
theme, moon_phase,
love_score, love_text,
work_score, work_text,
energy_score, energy_text,
communication_score, communication_text,
mood_score, mood_text,
risk_text,
transit_tags,
generated_at

Daily Batch Job (runs 02:00 UTC)

1. Calculate today's planetary positions (once, shared)
2. Fetch all active users
3. For each user:
 - a. Load natal chart from profile
 - b. Compute personal transit aspects
 - c. Score 6 categories
 - d. Check Redis cache – skip if today's advice already exists
 - e. Build prompt per category
 - f. Call AI API (rate-limited, queued)
 - g. Store result in daily_advice table + Redis cache
 - h. Send push notification via FCM
4. Log completion + any errors

7. iOS App Architecture

Stack

Language: Swift 5.9+
UI: SwiftUI

Architecture:	MVVM
Networking:	async/await + URLSession
Local storage:	SwiftData
Push:	Firebase iOS SDK
Auth:	Sign in with Apple
Subscriptions:	RevenueCat SDK
Analytics:	Mixpanel (or PostHog – open source option)
Localization:	Xcode String Catalogs (.xcstrings)
Min iOS:	17.0

8. Localization

Supported Languages

- English (en) — default

- Russian (ru)

Rules

- All UI strings stored in `Localizable.xcstrings`
- AI advice generated natively in the target language — never translated
- Russian uses grammatical gender (sourced from profile gender field)
- Tone in Russian: literary, warm, slightly poetic — never clinical
- Tone in English: wise, warm, approachable — never generic

Key string categories

<code>onboarding.*</code>	– all onboarding screens
<code>today.*</code>	– today screen labels
<code>categories.*</code>	– Love, Work, Energy, etc.
<code>chart.*</code>	– natal chart screen
<code>explore.*</code>	– mode descriptions
<code>profile.*</code>	– settings screen
<code>notifications.*</code>	– push notification copy
<code>errors.*</code>	– error messages

9. Monetization

Model: Freemium + Annual Subscription

Free tier:

- Full onboarding + natal profile
- Today's theme sentence
- 2 categories per day (Love + Energy, rotating)
- 1 interpretation mode (Practical Daily)

Premium (Lumina Plus):

- All 6 categories every day
- All 6 interpretation modes
- Full calendar view
- Advice history
- Personalized notification time

Pricing:

- Monthly: \$7.99 / month
- Annual: \$44.99 / year (~\$3.75/month)
- 7-day free trial on annual plan

Implementation: RevenueCat SDK (handles App Store billing, webhooks, entitlements)

Paywall trigger: After onboarding, when user tries to expand a locked category card.

10. Privacy & Security

- All birth data encrypted at rest (AES-256, via Supabase)
 - JWT authentication, refreshed every 24 hours
 - Sign in with Apple supported (no email required)
 - GDPR compliant: full data export + delete account
 - Russian 152-FZ compliant: data processing disclosure in onboarding
 - No data sold to third parties — stated clearly in onboarding and privacy policy
 - FCM tokens rotated on app launch
 - API calls authenticated — no public endpoints
-

11. Third-Party Services & Costs (Monthly Estimate)

Service	Purpose	Est. monthly cost
Railway.app	Backend hosting	\$5-20
Supabase	PostgreSQL database	Free - \$25
Upstash	Redis cache	Free - \$10
Google Places API	Birth place search	Free (under quota)
TimeZoneDB API	Historical timezone	Free
OpenAI API	Advice text generation	~\$0.02/user/day
Firebase	Push notifications	Free
RevenueCat	Subscription management	Free (under \$2.5k MRR)

Service	Purpose	Est. monthly cost
Apple Developer	App Store	\$99/year

Total at 500 active users: ~\$50-100/month
Total at 5,000 active users: ~\$300-600/month

12. MVP Scope (What We Build First)

In scope

- All 10 onboarding screens
- Today screen with all 6 categories
- Chart screen (static natal profile)
- Explore screen (mode switching)
- Profile + Settings screen
- Backend: natal calculation, daily batch, AI generation
- Push notifications
- English + Russian localization
- Freemium model with RevenueCat
- Sign in with Apple

Out of scope (Phase 2)

- Calendar with transit overlay
- Compatibility reports
- Advice history / journal
- Monthly forecasts
- iOS Widget
- WatchOS app
- Vedic mode (complex — added in Phase 2)
- Voice reading

13. Build Order

Week 1-2:

Backend setup (Railway, Supabase, Swiss Ephemeris)

Week 2-3:

Natal chart calculation endpoint – tested + verified

Week 3-4: Daily transit + scoring logic
Week 4-5: AI prompt engineering – all 6 categories, EN + RU
Week 5-6: Daily batch job + push notifications
Week 6-8: iOS onboarding flow
Week 8-10: iOS Today screen
Week 10-11: iOS Chart + Explore + Profile screens
Week 11-12: RevenueCat integration
Week 12-13: End-to-end testing
Week 13-14: TestFlight beta
Week 14-15: Bug fixes + App Store submission
Week 15-16: Launch
